WebFundamentals

1. What is the World Wide Web? The internet

2. Explain the functional differences between a web application's front-end and back-end.

Front end is the user interface such as a touch panel, mobile phone, tablet etc. Back-end is the coding/software that runs the device.

3. Describe what occurs on the back-end during a web interaction using the "Google query example" from the article or create your own example.

It is the software that searches the web for the most suitable answer to the query

4. What is the MERN stack?

It's used to help build javascript applications
